

PRODUCT DATASHEET

Home Electricity Monitor

DESCRIPTION

The Minim is our simplest display, but still packed with features to help you save money and reduce your CO₂ footprint. It is a simple stand-alone display that tells you how much electricity you are using in your home.

DISPLAY VIEWS

The top section is your 'speedometer'; it shows you how much electricity is flowing into your house. You can change the display to show Watts, how much you are spending or the amount of CO₂ you are producing.

The middle section is your 'milometer'; it shows you how much electricity you have used for a given period up to 30-days. It too can show electricity, monetary or units of CO₂.

The bottom section is the target bar; it shows progress against your own target. A tick or cross lets you know if you are on or off target today or how you did yesterday, over the last 7 or 30 days.
